

# Conventional Buffs

**Conventional** buffs have been used in the metal finishing industry for over 100 years. These buffs are suited for cut and color applications, as well as a flexible platform for satin finishing. *All Conventional buffs are made with a 1" arbor hole and are available in both HY (more aggressive cut or color) and BR (less aggressive cut and color) cloth.*

**Sewn Conventional** buffs are harder than loose buffs and as a result can be used for cut and color of flat and more accessible surfaces of all metals.

**Loose Conventional** buffs are made with one row of sewing around the arbor hole and are soft and flexible. They are ideal for reaching uneven surfaces while buffing or coloring metals, hard rubber, marble, and plastics.

**Sisal** buffs are used for cut down operations of ferrous metals. All the Sisal buffs are made from top quality sisal and sewn with 1/4" spiral sewing and treated for added cut and life.

**Laminated Sisal** buffs alternate cloth and sisal ply to create the desired firmness of the buffs. The use of cloth in this buff aids in compound retention and softens the buff for contoured parts. The combination of cloth and sisal provides cutting action and high color on steel and aluminum parts.

## Application focus - Garage and Restoration

A Loose BR buff with compound can be used on any aluminum or chrome wheels, motorcycle pipes, and bumpers to clean and brighten the finish. Make aluminum and chrome look new in one easy pass.

Type	OD	Case Qty	BR Cloth Part Number	Price	HY Cloth Part Number	Price
Sewn Conventional	4"	12	47400	\$2.71	47408	\$3.67
