

HOLE SAW ARBORS AND ACCESSORIES

HOLE SAW ARBORS and EXTENSIONS

Four standard arbor designs are available. Each includes a choice of a conventional high speed steel or a high performance carbide tipped 1/4" pilot drill. The pilot drill is secured with a set screw for easy replacement of the pilot drill. Quick-Hitch™ arbors enable instant change-outs of hole saws without additional tools and without removing the arbor from the chuck.

The A4 model has flats to fit a 5/8" (16mm) wrench. Specify an arbor that suits the hole saw diameter by the catalog number. Choose carbide tipped pilot drills (specified by the prefix 'X' in the catalog number) for use with carbide grit or diamond grit saws.

12" (300mm) Arbor Extensions are available that will fit either a 1/2" (13mm) A5 Chuck or a 3/8" (9.5mm) A15 Chuck.

HOLE SAW ARBORS for QUICK CHANGE CONNECTORS

A4 type arbors are compatible for use with AQC-14 Quick Change Connectors. A1 and A10E arbors are compatible with AQC38 Quick Change Connectors.

SPECIAL PURPOSE HOLE SAW ARBORS

Locking Arbors

These tools lock a hole saw firmly to the arbor on 1-1/2" diameter and larger saws. The arbor eliminates vibration and is particularly useful when cutting difficult materials or in high production applications. The arbor includes a 1/4" high speed steel pilot drill. Using a Starrett Locking Arbor can significantly extend tool life.

A17-38 Locking Arbor fits a 3/8" chuck

A17-12 Locking Arbor fits a 1/2" chuck

XA17-38 Locking Arbor includes a 1/4" carbide tipped pilot drill and fits a 3/8" chuck. This tool is also recommended for use with our carbide tipped hole saws.
